C-AR.1.2 · Weekly check · 5 questions

MA.7.AR.1.2 · Determine if two expressions are equivalent · Unit 9 Algebraic Expressions · Given Thursday, on the week's benchmark

Form title C-AR.1.2 Check · Determine if two expressions are equivalent
Description Learning goal: I can tell whether two expressions are equivalent. 5 questions, 1 point each. Work each one out on paper, then choose or type your answer. No calculator.
Locked mode ON (no calculator)

#	Question image	File · type	Options to add	Answer key	Pts
1	Select **all** the expressions that are equivalent to $\frac{5}{4}(12x+20)$. *Select **all** the correct answers.* A. $\frac{5}{4}(12x)+\frac{5}{4}(20)$ B. $\frac{53}{4}x+\frac{85}{4}$ C. $15x+25$ D. $15x+20$ E. $40x$	**Q1.png** Checkboxes	A B C D E	Check: **A, C** One point only if exactly these are checked.	1
2	A student rewrote $\frac{4}{3}(12x+12)$ as $28x$. The correct equivalent expression is ____. A. $9x+9$ B. $\frac{40}{3}x+\frac{40}{3}$ C. $16x+16$ D. $16x+12$	**Q2.png** Multiple choice Same problem, now multiple choice (paper: multiple choice)	A B C D	**C**	1
3	Are the two expressions equivalent? $3.5(2x+4)-5x+1$ and $2x+15$ A. Yes, because both have an x-term and a constant term. B. No, because the first simplifies to $12x+15$, not $2x+15$. C. Yes, because both of them simplify to $2x+15$. D. No, because $3.5(2x+4)$ is $7x+4$, giving $2x+5$.	**Q3.png** Multiple choice Same problem, now multiple choice (paper: multiple choice)	A B C D	**C**	1
4	Are the two expressions equivalent? $2.5(8x-2)+4x+8$ and $24x+3.5$ A. Yes, because both of them simplify to $24x+3.5$. B. No, because $2.5(8x-2)$ is $20x-2$, giving $24x+6$. C. Yes, because both have an x-term and a constant term. D. No, because the first simplifies to $24x+3$, not $24x+3.5$.	**Q4.png** Multiple choice	A B C D	**D**	1
5	Two expressions are shown. $4(x+2)-3x$ and $2(3x+4)-4x$ Are the two expressions equivalent? Choose the answer with the correct reason. A. Yes; both have an x-term and a constant term of 8. B. No; the first simplifies to $x+8$ and the second to $2x+4$. C. Yes; both equal 8 when $x=0$, so they are equivalent. D. No; the first simplifies to $x+8$ and the second to $2x+8$, so the x-terms are different.	**Q5.png** Rigor Multiple choice Same problem, now multiple choice (paper: multiple choice)	A B C D	**D**	1
6	LEARNING GOAL **I can tell whether two expressions are equivalent.** 4 I can show two expressions are equivalent using the properties of operations and explain which property I used. 3 I can decide whether two linear expressions are equivalent and rewrite one as the other. 2 I can use the distributive property on a simple expression. 1 I need help to start this.	**Level scale.png** Multiple choice (the template's last question)	Level 1 Level 2 Level 3 Level 4	no key	0

Answers with worked solutions are in the Answers folder next to the question images (same file names).
