DPP Weekly Checks in Google Forms

7th grade on-level · all 34 benchmarks · 102 forms · 340 questions · every question grades itself

What is in this folder

Item	What it is
Unit folders	One folder per Math Nation unit. Inside, one folder per benchmark, in teaching order. Each benchmark has three forms: **1 Check** (5 questions, Thursday), **2 Re-check** (3 questions, Wednesday after a reteach) and **3 Comparison** (2 questions, Wednesday, for a benchmark that was *not* retaught).
In each form folder	**Build sheet.pdf** (title, description, every question's type, options and answer key), the question images **Q1.png, Q2.png …** to upload, **Level scale.png** for checks, and an **Answers** folder with the answer and worked solution for each question.
01 Form build list.xlsx	Every form and question in one list, with columns to tick off what is built and paste each form's link.

One-time setup: the template form (about 15 minutes)

1. Upload this whole folder to your **school** Google Drive, so student responses stay in the school account.
2. Make a new blank form named `DPP template`. Settings → **Make this a quiz**: on. Release grades: **Immediately after each submission**. Respondents can see: **Missed questions** and **Point values** on, **Correct answers** off.
3. Settings → Responses: **Collect email addresses: Verified**, **Limit to 1 response**: on.
4. Add these questions, all **Required**:
   a. **Teacher**: Multiple choice, `Mr. C. Shaffer`, `Mr. J. Shaffer`. 0 points.
   b. **Period**: Dropdown, your period numbers. 0 points.
   c. **Choice question (copy me)**: Multiple choice with options `A` `B` `C` `D`. 1 point.
   d. **Typed question (copy me)**: Short answer. ⋮ → Response validation → **Regular expression** → **Matches** → `^-?(\d+(\.\d+)?|\.\d+|\d+/\d+|\d+ \d+/\d+)$` with the error text `Type only a number, like 12 or -3.5 or 2/7 or 4 1/3. No units, $, %, π or commas.`. 1 point.
   e. **Level** (last): Multiple choice, `Which level are you at right now?` with options Level 1 to Level 4. 0 points.

Building one form (about 5 minutes for a check)

1. In Drive, right-click **DPP template** → **Make a copy**. Rename it with the **Form title** from the build sheet, and paste the **Description**.
2. For each question on the build sheet: click the **copy me** question of the right type, click **Duplicate**, drag it into place, click the image icon and pick **Q1.png** (Google Drive tab → this folder).
3. Click **Answer key**: pick the letter, or for a typed question type every accepted answer from the build sheet and tick **Mark all other answers incorrect**. Checkbox questions (a few) are built from a plain Checkboxes question with the options on the sheet.
4. Delete the two **copy me** questions. On a check, add **Level scale.png** to the Level question; on a re-check or comparison form, delete the Level question.
5. Turn **Locked mode** on for no-calculator forms (the build sheet says which). Locked mode works only on school-managed Chromebooks, and it also blocks the Chromebook calculator.
6. Click **Preview**, answer it once with the key to check the score is 5/5 (or 3/3, 2/2), then delete that test response.

The week with Forms

1. **Before Thursday**: build or open the week's **Check**. Post its link in your Google Classroom and John's (as a co-teacher in his class, or send him the link to post).
2. **Thursday**, last 8 minutes: students take the check. Forms scores it and shows each student their score; they choose their level at the end.
3. **Friday or Monday**: open Responses → Summary. **Frequently missed questions** shows the item that gave the most trouble. That decides the reteach.
4. **Tuesday**: reteach, 8–10 minutes.
5. **Wednesday**: students take two short forms: the **Re-check** for the retaught benchmark and the **Comparison** form for the most recent benchmark that was not retaught.
6. **Data**: Responses → **Link to Sheets**, and link every form to one spreadsheet. The Teacher and Period columns split the two classes.

Good to know

- **Typed answers.** The validation only lets students submit a plain number, fraction or mixed number, so the accepted answers on each build sheet cover the ways a correct answer can be typed. If a student types a correct answer the key missed, open Responses → Question, find it, and mark it correct; Forms re-scores everyone who typed the same thing.
- **π answers.** Students type only the number in front of π (for 7π they type 7). The question image says so.
- **Correct answers stay hidden** until both teachers have given the form, so one class cannot pass answers to the next. Turn them on afterward if you want students to review.
- **What changed from the paper bank.** Forms cannot grade a graph, an expression or a written explanation, so 59 of the 340 problems now ask students to choose (the right graph, expression, inequality or full answer) or check boxes; 4 were redrawn from Cadence. The build sheet marks each one, and the list is on the next page. Every other problem is unchanged from edition 4.1.

Problems changed for Forms

Form	Q	What changed
C-DP.2.1 Check	2	Same problem, now check-the-boxes (paper: a written answer) (list answer)
C-DP.2.1 Check	4	Same problem, now check-the-boxes (paper: a written answer) (list answer)
C-DP.2.1 Re-check	3	Same problem, now check-the-boxes (paper: a written answer) (list answer)
C-DP.2.1 Comparison	2	Same problem, now check-the-boxes (paper: a written answer) (list answer)
C-NSO.1.2 Check	2	Same problem, now multiple choice (paper: a written answer) (a repeating bar cannot be typed)
C-NSO.1.2 Check	5	Same problem, now multiple choice (paper: a written answer) (explanation plus a repeating decimal)
C-DP.2.2 Check	4	Same problem, now multiple choice (paper: a matching grid) (matching grid)
C-DP.2.2 Check	5	Same problem, now multiple choice (paper: a written answer) (event, both probabilities and the difference)
C-DP.2.2 Re-check	3	Same problem, now multiple choice (paper: a matching grid) (matching grid)
C-DP.2.4 Check	1	Same problem, now multiple choice (paper: a written answer) (three-part answer)
C-DP.2.4 Check	5	Same problem, now multiple choice (paper: a written answer) (three-part answer)
C-DP.2.4 Comparison	2	Same problem, now multiple choice (paper: a written answer) (three-part answer)
C-NSO.2.2 Check	5	Same problem, now multiple choice (paper: a written answer) (step plus value)
C-GR.1.2 Check	5	Same problem, now multiple choice (paper: a written answer) (plot plus difference)
C-DP.1.3 Check	5	Same problem, now multiple choice (paper: a written answer) (choice, prediction and reason)
C-AR.3.3 Check	5	Same problem, now multiple choice (paper: a written answer) (store plus amount)
C-AR.3.2 Check	1	Same problem, now multiple choice (paper: a written answer) (proportion plus solution)
C-AR.3.2 Check	5	Same problem, now multiple choice (paper: a written answer) (distance plus time)
C-AR.4.5 Check	4	Redrawn from Cadence (the paper item was a written answer) (graph answer)
C-AR.4.5 Check	5	Same problem, now multiple choice (paper: a written answer) (store plus explanation plus amount)
C-AR.4.5 Re-check	1	Redrawn from Cadence (the paper item was a written answer) (graph answer)
C-AR.3.1 Check	3	Same problem, now multiple choice (paper: a written answer) (percent plus count)
C-NSO.1.1 Check	5	Same problem, now multiple choice (paper: a written answer) (step plus single power)
C-NSO.1.1 Re-check	2	Same problem, now multiple choice (paper: a written answer) (a typed exponent cannot be matched reliably)
C-AR.1.1 Check	1	Same problem, now multiple choice (paper: a written answer) (a typed expression cannot be matched reliably)
C-AR.1.1 Check	3	Same problem, now multiple choice (paper: a written answer) (typed expression)
C-AR.1.1 Check	4	Same problem, now multiple choice (paper: a written answer) (typed expression)
C-AR.1.1 Check	5	Same problem, now multiple choice (paper: a written answer) (expression plus simplified form)

C-AR.1.1 Re-check	1	Same problem, now multiple choice (paper: a written answer) (typed expression)
C-AR.1.1 Re-check	3	Same problem, now multiple choice (paper: a written answer) (typed expression)
C-AR.1.1 Comparison	1	Same problem, now multiple choice (paper: a written answer) (typed expression)
C-AR.1.1 Comparison	2	Same problem, now multiple choice (paper: a written answer) (typed expression)
C-AR.1.2 Check	2	Redrawn from Cadence (the paper item was a matching grid) (matching grid)
C-AR.1.2 Check	5	Same problem, now multiple choice (paper: a written answer) (yes/no plus both simplified forms)
C-AR.1.2 Comparison	2	Redrawn from Cadence (the paper item was a matching grid) (matching grid)
C-AR.2.1 Check	2	Same problem, now multiple choice (paper: a written answer) (a typed inequality cannot be matched reliably)
C-AR.2.1 Check	4	Same problem, now multiple choice (paper: a written answer) (typed inequality)
C-AR.2.1 Re-check	1	Same problem, now multiple choice (paper: a written answer) (typed inequality)
C-AR.2.1 Re-check	3	Same problem, now multiple choice (paper: a written answer) (solution plus graph)
C-AR.2.1 Comparison	1	Same problem, now multiple choice (paper: a written answer) (typed inequality)
C-AR.2.1 Comparison	2	Same problem, now multiple choice (paper: a written answer) (solution plus graph)
C-AR.2.2 Check	1	Same problem, now multiple choice (paper: a written answer) (equation plus solution)
C-AR.2.2 Check	3	Same problem, now multiple choice (paper: a written answer) (equation plus solution)
C-AR.2.2 Check	5	Same problem, now multiple choice (paper: a written answer) (equation, solution, gym and amount)
C-AR.2.2 Re-check	2	Same problem, now multiple choice (paper: a written answer) (equation plus solution)
C-AR.2.2 Comparison	1	Same problem, now multiple choice (paper: a written answer) (equation plus solution)
C-AR.4.3 Check	2	Same problem, now multiple choice (paper: a written answer) (a drawn graph cannot be graded)
C-AR.4.3 Check	3	Same problem, now multiple choice (paper: a written answer) (graph plus the meaning of the constant)
C-AR.4.3 Check	4	Same problem, now multiple choice (paper: a written answer) (a drawn graph cannot be graded)
C-AR.4.3 Check	5	Same problem, now multiple choice (paper: a written answer) (graph plus explanation)
C-AR.4.3 Re-check	1	Same problem, now multiple choice (paper: a written answer) (a drawn graph cannot be graded)
C-AR.4.3 Re-check	2	Same problem, now multiple choice (paper: a written answer) (graph plus the meaning of the constant)
C-AR.4.3 Re-check	3	Same problem, now multiple choice (paper: a written answer) (a drawn graph cannot be graded)
C-AR.4.2 Check	5	Same problem, now multiple choice (paper: a written answer) (constant plus meaning)
C-AR.4.1 Check	5	Same problem, now multiple choice (paper: a written answer) (three-part judgment)
C-AR.4.4 Check	1	Same problem, now multiple choice (paper: a written answer) (a typed equation cannot be matched reliably)
C-AR.4.4 Check	3	Same problem, now multiple choice (paper: a written answer) (typed equation)
C-AR.4.4 Check	4	Same problem, now multiple choice (paper: a written answer) (three values)
C-AR.4.4 Re-check	1	Same problem, now multiple choice (paper: a written answer) (typed equation)
C-AR.4.4 Comparison	1	Same problem, now multiple choice (paper: a written answer) (typed equation)
C-DP.1.5 Check	4	Same problem, now multiple choice (paper: a written answer) (display, reason and description)
C-DP.1.5 Check	5	Same problem, now multiple choice (paper: a written answer) (display, reason and value)
C-DP.1.5 Re-check	2	Same problem, now multiple choice (paper: a written answer) (display, reason and description)
