C-AR.4.5 · Weekly check · 5 questions

MA.7.AR.4.5 · Real-world proportional problems · Unit 6 Multi-Step Problems With Proportional Relationships · Given Thursday, on the week's benchmark

Form title C-AR.4.5 Check · Real-world proportional problems
Description Learning goal: I can solve multi-step problems with proportional relationships. 5 questions, 1 point each. Work each one out on paper, then choose or type your answer. Calculator allowed.
Locked mode OFF (calculator allowed; Locked mode blocks the Chromebook calculator)

Short-answer validation (already on the template's short-answer question; copy that question): Regular expression → Matches → `^-?(\d+(\.\d+)?|\.\d+|\d+/\d+|\d+ \d+/\d+)$`
Error text: Type only a number, like 12 or -3.5 or 2/7 or 4 1/3. No units, $, %, π or commas.

#	Question image	File · type	Options to add	Answer key	Pts
1	A horse-drawn carriage travels at a constant rate. It travels $\frac{1}{2}$ mile in 10 minutes. At this rate, how many minutes will it take the carriage to travel $2\frac{3}{4}$ miles? Type a number only. No units, $ or %.	**Q1.png** Short answer	none (typed answer)	**55** Tick "Mark all other answers incorrect." Response validation: Regular expression, Matches (see top).	1
2	A 3-D printer uses $\frac{3}{5}$ ounce of plastic every $\frac{1}{3}$ hour, at a constant rate. How many ounces of plastic does the printer use in 12 hours? Write your answer as a fraction or a mixed number in simplest form. Type a whole number, a fraction like 2/7, or a mixed number like 4 1/3 with a space after the whole number.	**Q2.png** Short answer	none (typed answer)	**21 3/5 · 108/5** Tick "Mark all other answers incorrect." Response validation: Regular expression, Matches (see top).	1
3	A store sells ribbon at a constant price. $4\frac{1}{4}$ meters of ribbon cost $15.30. At that rate, what is the cost of $7\frac{1}{2}$ meters of ribbon? Type a number only. No units, $ or %.	**Q3.png** Short answer	none (typed answer)	**27.00 · 27 · 27.0** Tick "Mark all other answers incorrect." Response validation: Regular expression, Matches (see top).	1
4	A car uses gas at a constant rate. It travels 154 miles on 5.5 gallons of gas. How many gallons of gas are needed to travel 210 miles? A. 38.2 gallons B. 6.9 gallons C. 4.0 gallons D. 7.5 gallons	**Q4.png** Multiple choice Redrawn from Cadence (the paper item was a written answer)	A B C D	**D**	1
5	Store A sells rope for $6.30 for $2\frac{1}{4}$ meters. Store B sells the same rope for $13.75 for 5 meters. At each store, the cost is proportional to the amount bought. Which store is the better buy, and why? A. Store A, because its price is about $2.63 per meter, which is less than Store B's $2.75 per meter. B. Store A, because $6.30 is less than $13.75. C. Store B, because its price is $2.75 per meter, which is $0.05 less than Store A's $2.80 per meter. D. Store B, because its price is $2.75 per meter, which is $0.40 less than Store A's $3.15 per meter.	**Q5.png** Rigor Multiple choice Same problem, now multiple choice (paper: a written answer)	A B C D	**C**	1
6	LEARNING GOAL I can solve multi-step problems with proportional relationships. 4 I can compare two proportional situations and justify which is the better choice. 3 I can solve a real-world problem with a proportional relationship in two or more steps. 2 I can find a unit rate. 1 I need help to start this.	**Level scale.png** Multiple choice (the template's last question)	Level 1 Level 2 Level 3 Level 4	no key	0

Answers with worked solutions are in the Answers folder next to the question images (same file names).
