C-AR.2.2 · Weekly check · 5 questions

MA.7.AR.2.2 · Two-step equations with rational numbers · Unit 10 Equations and Inequalities · Given Thursday, on the week's benchmark

Form title C-AR.2.2 Check · Two-step equations with rational numbers
Description Learning goal: I can write and solve two-step equations. 5 questions, 1 point each. Work each one out on paper, then choose or type your answer. Calculator allowed.
Locked mode OFF (calculator allowed; Locked mode blocks the Chromebook calculator)

Short-answer validation (already on the template's short-answer question; copy that question): Regular expression → Matches → `^-?(\d+(\.\d+)?|\.\d+|\d+/\d+|\d+ \d+/\d+)$`
Error text: Type only a number, like 12 or -3.5 or 2/7 or 4 1/3. No units, $, %, π or commas.

1	A park charges a $25.00 entry fee plus $12.50 for each hour of skate rental. A visitor paid $62.50 in all. Which choice shows an equation that can be used to find h, the number of hours of skate rental the visitor paid for, and its solution? A. $12.5h - 25 = 62.5;\ h = 7$ B. $25h + 12.5 = 62.5;\ h = 2$ C. $12.5h + 25 = 62.5;\ h = 7$ D. $12.5h + 25 = 62.5;\ h = 3$	**Q1.png** Multiple choice Same problem, now multiple choice (paper: a written answer)	A B C D	**D**	1
2	Solve the equation for h. $1.5(h + 1.6) = -0.6$ Type a number only. No units, $ or %.	**Q2.png** Short answer	none (typed answer)	**-2** Tick "Mark all other answers incorrect." Response validation: Regular expression, Matches (see top).	1
3	Three students each saved the same amount, s dollars, and then each earned $5.00 more. Together they now have $105.00. Which choice shows an equation that can be used to find s, and its solution? A. $3(s + 5) = 105;\ s = 30$ B. $3s + 5 = 105;\ s = 33\frac{1}{3}$ C. $3(s + 5) = 105;\ s = 35$ D. $3(s - 5) = 105;\ s = 40$	**Q3.png** Multiple choice Same problem, now multiple choice (paper: a written answer)	A B C D	**A**	1
4	What is the exact value of g in the equation shown? $-1\frac{7}{9} = \frac{2}{3}g - 4$ Type a number only. No units, $ or %.	**Q4.png** Short answer	none (typed answer)	**3 1/3 · 10/3** Tick "Mark all other answers incorrect." Response validation: Regular expression, Matches (see top).	1
5	Gym A charges $24.50 each month. Jordan used a coupon worth $35.00 off the total and paid Gym A $185.50 in all. Let n be the number of months Jordan paid for. Gym B charges $26.50 each month and takes no coupons. Which choice gives n, the gym that would have cost less for the same number of months, and how much less? A. $n = 6$; Gym B, by $26.50 B. $n = 9$; Gym A, by $53.00 C. $n = 9$; Gym A, by $18.00 D. $n = 8$; Gym A, by $26.50	**Q5.png** Rigor Multiple choice Same problem, now multiple choice (paper: a written answer)	A B C D	**B**	1
6	LEARNING GOAL I can write and solve two-step equations. 4 I can write a two-step equation from a real-world context, solve it, and check the answer. 3 I can solve a two-step equation, including with rational numbers or the distributive property. 2 I can solve a one-step equation. 1 I need help to start this.	**Level scale.png** Multiple choice (the template's last question)	Level 1 Level 2 Level 3 Level 4	no key	0

Answers with worked solutions are in the Answers folder next to the question images (same file names).
